

Core Training Requirements for Medication Self-Review

Approved January 30, 2015

The following Core Training Requirements are outlined for ALL members to follow when completing the self-review for medications pertinent to scope of practice. The self-review MUST capture the core training requirements listed below.

Objectives

Approved education for reviewing medications pertinent to scope of practice by SCoP members at ALL licence levels (EMR, EMT, PCP, ICP and ACP) must address the following objectives:

1. Review each medication approved for administration and monitoring pertinent to the scope of practice for your licence level. The review should include: the generic and trade names; classification; mechanism of action indications; contraindications; precautions; side effects; dosages (adult and pediatric); and how the drug is supplied for each medication approved for administration and monitoring pertinent to the scope of practice for your licence level.
2. Review the five rights of drug administration.
3. Review the advantages and disadvantages of each alimentary and parenteral drug administration routes pertinent to the scope of practice for your licence level.
4. Review the technique for medication administration for each route pertinent to the scope of practice for your licence level.
5. Review any given drug dose for medications used in your system using variations of the basic formula.

Instructor Qualifications

Self-Review

Record Keeping

Members are no longer required to submit a certificate of completion as evidence in order to meet the requirement for renewal. Instead the annual registration renewal form on eApplication will include a declaration check box indicating the member has met the requirement, and the year in which the requirement was met.

Recertification

Medication self-review is a mandatory licence requirement and must be reviewed at least every two years. It is not eligible for CME credits.
