

Core Training Requirements for Airway Devices not requiring Visualization of Vocal Cords and not introduced Endotracheally

Approved February, 2013

The following Core Training Requirements are outlined as guidance to agencies or instructors who intend to provide training for the PCP upgrade to the 2011 NOCPs. The actual training module used by the agency or instructor must be approved by the college. Please submit using the [SCoP eApplication Continuing Medical Education \(CME\) Course Approval form](#).

Prerequisite

Members completing this training must have successfully obtained a training level of PCP 2001 NOCP.

Objectives

Approved Training for use of airway devices not requiring visualization of vocal cords and not introduced endotracheally by SCoP members at PCP levels must address the following objectives:

Lecture:

1. Explain the purposes of and indications for airway devices not requiring visualization of vocal cords and not introduced endotracheally.
2. Describe various types of airway devices not requiring visualization of vocal cords and not introduced endotracheally.

Lab:

1. Perform sizing procedures for airway devices not requiring visualization of vocal cords and not introduced endotracheally.
2. Perform insertion of airway devices not requiring visualization of vocal cords and not introduced endotracheally.

Assessment

The assessment should reflect the following critical factors inherent in the demonstration of skills, knowledge and abilities:

1. Consistency (the ability to repeat practice techniques and outcomes)
2. Independence (the ability to practice without assistance from others)
3. Timeliness (the ability to practice in a time frame that enhances patient safety)
4. Accuracy (the ability to practice utilizing correct techniques and to achieve intended outcomes)
5. Appropriateness (the ability to practice in accordance with clinical standards and Saskatchewan protocols)

Approved Training will include individual assessment of the following factors:

Written: Optional

Practical:

1. Given a simulated patient, independently demonstrate more than once the correct sizing procedures applicable to the appropriate patient's age for airway devices not requiring visualization of vocal cords and not introduced endotracheally.
2. Given a simulated patient, independently demonstrate more than once the correct and timely insertion for the appropriate patient' age for airway devices not requiring visualization of vocal cords and not introduced endotracheally.

Instructor Qualifications

Approved training will be provided by a health care practitioner at the level of ICP, ACP, R.N., R.N. Practitioner, LPN, or Physician, and who has been trained in and is familiar with use of airway devices not requiring visualization of vocal cords and not introduced endotracheally.

Record Keeping

A copy of the course outline and/or presentation and assessment test and/or checklist for each participant should be kept on the instructor or agency file for five years and could be subject to audit by the College.

The instructor should "sign off" the skill on the practitioner's CME Report Form. The instructor's signature indicates proficiency. Please insert the date of the assessment and print the name of the evaluator on the form in the appropriate spaces provided.

Recertification

Members are responsible for ensuring they have taken the initial training before they are permitted to perform this skill. The employer should establish policies regarding how often retraining should occur. Members are required to produce evidence of training as per region policy for up to five years.
